## Educational support for chronically or long-term ill students

On average, every classroom contains about three students with a chronic condition or long-term illness. How can you best organize education for such a student? What options are available?

KluppluZ's OZL consultant (Educational Support for Ill Students) supports teachers, educators, and parents. This service is free of charge for schools and parents. Within the framework of Appropriate Education (Passend Onderwijs), schools can access this provision, which is subsidized by the Dutch Ministry of Education, Culture and Science (OCW).

KluppluZ provides educational support in the West-Brabant region. We also offer information and presentations regarding education for ill students to schools, internal support networks (IB-networks), and educational partnerships (samenwerkingsverbanden). To find a consultant in your region, please visit [www.ziezon.nl](http://www.ziezon.nl). Ziezon is the national network uniting all OZL consultants.

## Educational support

OZL stands for educational support for children aged 4 to 18 who are acutely, seriously, or long-term ill. To ensure that a long-term or chronically ill child can continue their education, a great deal often needs to be arranged. First and foremost, the school is responsible for this. The school can receive support from an OZL consultant. The consultant also offers advice and assistance to parents regarding education.

- The student remains connected to the class, teachers, and friends;
- The child can focus on what they are still capable of doing, which is essential for self-confidence;
- We align the continuous learning pathway as closely as possible with the support needs of the ill student.

## The OZL consultant

The OZL consultant guides and supports parents, students, and educational professionals with the educational progress and development of ill students. The consultant:

- Possesses expertise in various medical conditions;
- Translates medical needs into educational practice;
- Coordinates and aligns with the school, hospital, student, and parents;
- Collaborates and coordinates with ambulatory support workers, youth physicians, compulsory education officers (leerplichtambtenaren), educational consultants, and the Youth and Family Centre (Centrum voor Jeugd en Gezin);
- Collaborates with the OZL consultant of a University Medical Centre (UMC);
- Can organize home-bound education if required;
- Deploys "KlasseContact" (ICT tools for remote classroom attendance) if required.
